**The Benefits**

The Advanced Oxidation gases created by the RGF Photohydroionization™ Cell are safe environmentally friendly oxidizers that revert back to oxygen and hydrogen. The RGF - BOSII utilizes the PHI Cell to create hydroperoxides, super oxide ions, ozonide ions and hydroxides. The ozone produced is a safe low concentration, produced by a targeted high intensity UV light technology. This method is far safer than the traditional ozone generators. Targeted UV ozone generators do not produce nitric oxide gas or nitric acid and they have a very high efficiency rating. The additional oxidizers provides a broader range of applications and redundant oxidation gases.

## The Physics of RGF's Proprietary Photohydroionization™

A high intensity UV light targeted on a hydrated Quad-Metallic target in an ozone atmosphere thereby creating Hydroperoxides, Super Oxide ions, Hydroxyl Radicals, Ozonide Ions and Hydroxides. All are very aggressive friendly gaseous oxidizers. By friendly we mean oxidizers that revert back to oxygen and hydrogen after they oxidize the organics, bacteria, odor or gases.
